

Human Development Index (HDI) Predictor

Communication

Project: Human Development Index (HDI) Predictor

Phase: Project Demonstration

1. Demonstration Narrative

The demonstration explains the problem being solved, walks through the Home page's explanation of the HDI, shows a live prediction for both a high- and a low-development country, and highlights the correlation heatmap that justifies the choice of input features.

2. Key Talking Points

- Why HDI matters and why manual computation is slow
- How the four chosen indicators correlate strongly with HDI (0.83–0.97)
- How the Linear Regression model was trained and evaluated ($R^2 \approx 0.99$)
- Live demo of the Flask app predicting HDI for two contrasting countries

3. Audience

Internship mentors, peers, and anyone evaluating the project submission.
