

Human Development Index (HDI) Predictor

Demonstration of Proposed Features

Project: Human Development Index (HDI) Predictor

Phase: Project Demonstration

1. Live Walkthrough

- Home page — introduction to the HDI and a call to action
- Prediction page — select a country, enter Life Expectancy, Mean Years of Schooling, GNI per Capita, Internet Users
- Submit — Result page shows the predicted HDI score and development category
- Repeat — select a country from a different development tier to show the model responds sensibly across the full range

2. Example Predictions Shown

Country	Predicted HDI	Category
Norway	0.962	Very High Human Development
Niger	0.355	Low Human Development

3. What This Proves

The model correctly separates countries across the entire development spectrum, confirming that the four chosen indicators carry enough signal for an accurate, interpretable prediction.
